## Executive Summary

Assurant Europe Life Insurance N.V. (further referred to as “AEL” or “the company”), is a life insurance company, incorporated in the Netherlands as a Naamloze Vennootschap (public limited company) on 29 October 2018. It received its license to operate on 9 June 2020. AEL is supervised by De Nederlandsche Bank (“DNB”) and the Autoriteit Financiële Markten (“AFM”).

This report has been prepared to comply with the reporting requirements of the EU-wide regulatory framework for insurance companies, Solvency 2, which came into force 1 January 2016. This is AEL’s first SFCR and as a result this report does not hold comparatives.

### Business and performance

AEL manages portfolios in the following segments of insurance:

- Creditor Life - comprising life insurance; and
- Creditor Health - comprising disability insurance, connected to life policies.

These segments went into run-off in 2018 and no new policies were written since. The life and health policies were usually sold together and in combination with a consumer lending arrangement, issued by one of AEL’s business partners (banks and similar institutions).

The company assumed two EU-insurance portfolios of two Assurant group companies domiciled in the United Kingdom, on 2 November 2020. Profit and loss accounts in this document therefore in effect hold only 2 months of operations.

AEL closed 2020 with a statutory profit after tax of Euro 245,240. This result includes start-up costs of Euro 285,989.

In 2020, the company did not experience a COVID-related increase in mortality.

Section A provides an overview of business performance in the year under review.

### System of governance

AEL is governed by a two-tier board structure with a Board of Directors and a Supervisory Board of Directors. AEL implemented the governance requirements of the Solvency 2 regime and has four key functions: actuarial, compliance, risk management and internal audit.

Refer to section B for further details.

### Risk profile

As a provider of life and health insurance, the company is exposed to a number of risks, the main ones being Underwriting risk and Market risk. The company invests in fixed income instruments and is exposed to market volatility and default risk, both for which appropriate capital is set aside.

Section C demonstrates in further detail to which risks the company is exposed and how these risks are mitigated.

### Valuation for solvency and statutory purposes

This SFCR provides insight in the company’s balance sheet and available capital prepared in accordance with Solvency 2 guidelines. These guidelines strive for a market consistent valuation. AEL has opted to prepare its statutory financial statements in accordance with these solvency 2 principles. Consequently, this document does not show valuation differences between the two standards but only some classification differences.

Chapter D explains the Solvency 2 (and statutory) valuation in more detail.

### Capital management

The company's capital management focusses on ensuring the adequate run-off of the in-force portfolio. Due to the limited size of the portfolio, the company's solvency position is determined by the Absolute minimum capital requirement (AMCR). The year-end solvency position is as follows:

	<b>2020</b>
€'000	
Eligible Own Funds	7.670
SCR	1.526
AMCR	3.700
<b>Solvency Ratio %</b>	<b>207%</b>

Further detail is provided in Section E.

### Outlook

The reader of this report should be conscious that a) while the company's individual exposures to COVID19 may be modest, adverse developments in economic climate / capital markets / mortality will also impact the company and that b) the level of volatility of future economic outcomes may be higher than historical developments would indicate.

## A Business and performance

### A.1 Business

#### A.1.1 Name and legal form

AEL is a life insurance company based in Amsterdam, the Netherlands. The company was incorporated on 29 October 2018 and received its license to operate as a life insurer on 9 June 2020. It is a Naamloze Vennootschap.

#### A.1.2 Name and contact details of the responsible supervisory authority

Prudential supervision of AEL is the responsibility of De Nederlandsche Bank (“DNB”), Westeinde 1, 1000 AB, Amsterdam, The Netherlands.

Financial conduct is supervised by the Autoriteit Financiële Markten (“AFM”), Vijzelgracht 50, 1017 HS, Amsterdam, The Netherlands.

TWG Europe Ltd, AEL’s shareholder, is supervised by the Prudential Regulation Authority (“PRA”), 20 Moorgate, London, EC2R 6DA, United Kingdom.

#### A.1.3 Name and contact details of external auditor

AEL’s external auditor is PriceWaterhouseCoopers N.V., Burgemeester Roelenweg 13G, 8021EV, Zwolle, The Netherlands.

#### A.1.4 Shareholders and position within the group

AEL’s shares are held by TWG Europe Ltd, one of the holding companies ultimately owned by Assurant Inc, a public company listed on the New York Stock Exchange (ticker: AIZ), registered in Delaware, United States of America.

A simplified version of the group’s corporate structure is shown below:

AEL has issued 5,440,000 shares of which 5,440,000 (100%) are owned by TWG Europe Ltd.

#### A.1.5 Material lines of business and material geographical areas where business is carried out

AEL's principal activity is the maintenance of a small life & health portfolio with risks in the European Union.

AEL distinguishes the following segments:

- Creditor Life (mortality cover)
- Creditor Health (disability, accident)

Its Solvency 2 lines of business are:

- Life
- Health SLT

These lines of business are illustrated in the table below, using financial information for the year ended 31 December 2020.

€'000	Technical provisions (excl risk margin)			Premiums earned		
	Gross	Ceded	Net	Gross	Ceded	Net
Life	2.045	29	2.016	588	10	578
Health SLT	453	5	448	15	1	14
<b>Total</b>	<b>2.498</b>	<b>33</b>	<b>2.465</b>	<b>602</b>	<b>11</b>	<b>592</b>

The territories of operation are The Netherlands, Belgium, Spain, Germany and Ireland.

The portfolio does not hold policies with discretionary benefits or embedded guarantees.

The portfolio's remaining duration is such as the UFR does not impact technical provisions.

#### A.1.6 Significant business or other events that have occurred during the reporting period

The following events were of significance to the company:

##### UK departure from the European Union

Following the decision of the UK to leave the European Union, Assurant established AEL for the purpose of assuming its EU-portfolio. On 2 November 2020, AEL assumed the in-force European Union located risks of London General Life Insurance Company Ltd and Assurant Life Insurance Company Ltd.

##### COVID19

The COVID-19 pandemic had limited impact on the financial position of AEL. The company did not experience significant growth in mortality or disability claims (it started operations on 2 November 2020). As its investment portfolio only holds Dutch government bonds, no impact was noted there either.

The outlook for 2021 is uncertain and in case the vaccination strategies adopted throughout the EU do not deliver the intended outcomes, AEL may be impacted by increased numbers of mortality or disability claims.

### A.1.7 Business performance

The table below shows the performance of the company's operations by Solvency 2 section (which in case of AEL is also applied for statutory purposes):

		<b>2020</b>
€'000		
Underwriting performance	Section A.2	319
Investment performance	Section A.3	-9
Performance of other activities	Section A.4	0
<b>Profit before tax in statutory financial statements</b>		<b>311</b>

### A.2 Underwriting Performance

Underwriting performance per Solvency 2 line of business is summarised in below table.

		Line of Business for: <b>life insurance</b>		<b>Total</b>
		Health insurance	Other life insurance	
		C0210	C0240	C0300
<b>Premiums written</b>				
R1410	Gross	-213	68.800	68.588
R1420	Reinsurers' share			0
R1500	Net	-213	68.800	68.588
<b>Premiums earned</b>				
R1510	Gross	14.618	587.678	602.296
R1520	Reinsurers' share	679	9.722	10.401
R1600	Net	13.938	577.956	591.895
<b>Claims incurred</b>				
R1610	Gross	-76.331	41.621	-34.710
R1620	Reinsurers' share	-4.382	-17.540	-21.923
R1700	Net	-71.949	59.162	-12.787
<b>Changes in other technical provisions</b>				
R1710	Gross			0
R1720	Reinsurers' share			0
R1800	Net	0	0	0
R1900	<b>Expenses incurred</b>	628	26.052	26.681
<b>Administrative expenses</b>				
R1910	Gross	0	0	0
R1920	Reinsurers' share			0
R2000	Net	0	0	0
<b>Investment management expenses</b>				
R2010	Gross			0
R2020	Reinsurers' share			0
R2100	Net	0	0	0
<b>Claims management expenses</b>				
R2110	Gross	0	0	0
R2120	Reinsurers' share			0
R2200	Net	0	0	0
<b>Acquisition expenses</b>				
R2210	Gross	-236	22.694	22.458
R2220	Reinsurers' share	0	0	0
R2300	Net	-236	22.694	22.458
<b>Overhead expenses</b>				
R2310	Gross	864	3.358	4.222
R2320	Reinsurers' share			0
R2400	Net	864	3.358	4.222
R2500	<b>Other expenses</b>			258.989
R2600	<b>Total expenses</b>			285.670
R2700	<b>Total amount of surrenders</b>			0
	<b>Underwriting result</b>	85.259	492.742	319.012

### Premiums earned (net)

This represents the sum of premiums earned during the year, net of premiums attributable to reinsurers. Premiums earned follow the risk emergence pattern of the different types of policies.

### Claims incurred (net)

Comprises the sum of the claims paid and the change in the provision for claims outstanding during the financial year, net of reinsurance.

### Changes in other technical provisions

Not applicable

### Expenses incurred

This represents all technical expenses incurred by the company in the 2<sup>nd</sup> half of the year, after having received the license to operate as an insurer.

### Other expenses

This represents all expenses incurred by the company before it received its license to operate as an insurer. These expenses are not allocated to an insurance line of business.

### Underwriting result

The underwriting result measured in accordance with Solvency 2 valuation principles was positive following updating all assumptions to most recent experience reviews.

### Geographical areas

All business managed is in the EU. The territories of operation are The Netherlands, Belgium, Spain, Germany and Ireland.

## A.3 Investment Performance

### A.3.1 Investment holdings

The company's investment portfolio as at 31 December of the current period and the investment income generated in the period under review is as follows:

	Position as at end of period		Income for the period	
	€'000	%	€'000	%
Government bonds	4.646	37%	-2	19%
Corporate bonds	0	0%	0	0%
Cash and deposits	8.058	63%	-5	52%
Asset management expenses			-3	29%
<b>Total</b>	<b>12.704</b>	<b>100%</b>	<b>-9</b>	<b>100%</b>

The company holds a very liquid portfolio of government bonds and cash at banks. Investment returns are negative, in accordance with the market environment existing at the time that AEL entered the capital markets in 2020. Cash and deposits generate negative interest.

#### **A.4 Performance of other activities**

The company's only activity is that of life insurance business.

#### **A.5 Any other disclosures**

There is no other information required to be disclosed regarding the performance of the business.

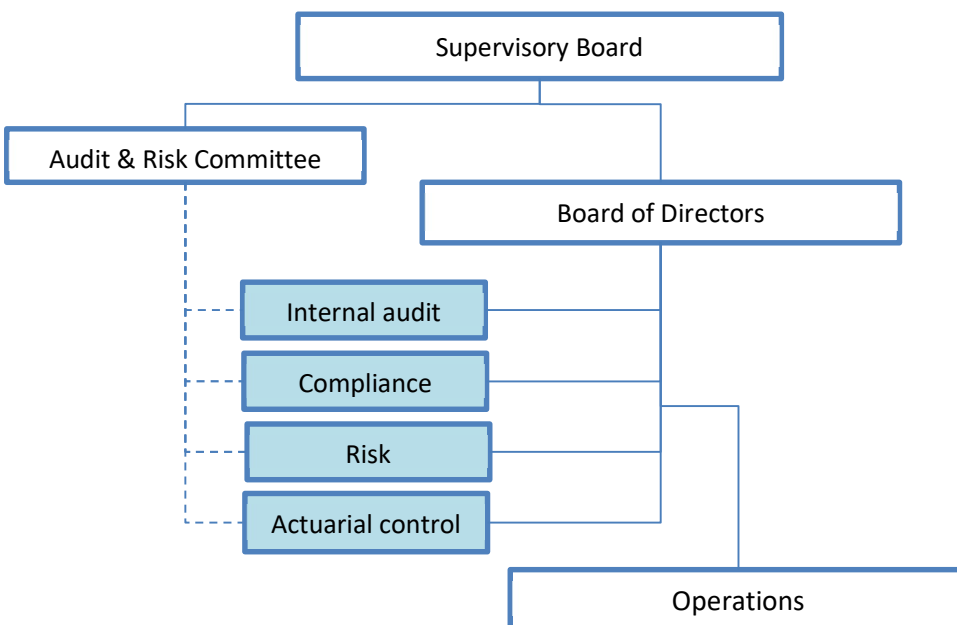

## B System of governance

### B.1 General information on the system of governance

#### B.1.1 Governance structure

AEL’s system of governance is embedded within the overarching system of governance of the Assurant group. The design and effectiveness of system of governance is responsibility of the Board of Directors. The Board of Directors is supervised by an independent board of Supervisory Directors. The Board of Directors delegates responsibilities for certain functions to Key Function Holders (in blue in below table). The company maintains a governance map which documents the detailed implementation of the system of governance. This includes the terms of reference and detailed roles and responsibilities for the key function holders.

The governance structure is summarised in the picture below:

##### B.1.1.1 Supervisory Board

The Supervisory Board supervises the Board of Directors and oversees that the Board of Directors acts in accordance with the Company’s strategy, policies and objectives. It is collectively responsible for coaching and assisting the Board of Directors when necessary.

##### Sub-Committee

The company’s supervisory board has established an Audit Risk & Compliance Committee.

##### B.1.1.2 Board of Directors

The Board comprises the Chief Executive Officer (“CEO”), the Chief Financial Officer (“CFO”), and the Head of Risk.

The Board of Directors sets the strategy and business plan within the context of Assurant group's plans and ensures that the necessary financial and human resources are in place to meet the organisation's objectives.

### B.1.1.3 Key function holders

The board of directors has delegated the execution of certain key functions to senior management / key function holders. These are functions that have a material effect on the system of internal control in the business and influence material decision making. The key functions have been defined considering the requirements of Solvency 2 regulations and guidance from regulators. The key functions are as follows:

- Risk management
- Internal audit
- Actuarial (control)
- Compliance

Each Key Function Holder prepares a functional performance report to the board(s) on a quarterly basis (risk management & compliance) or annual (actuarial and internal audit) basis.

The detailed responsibilities for each Key Function Holder are documented in the Governance Map which is reviewed and approved by the board of directors on a regular basis. This ensures that each key function holder has the necessary authority and operational independence to carry out their role. On an annual basis, as part of the Business Planning process, each key function holder will ensure that they have the necessary resources to deliver on their responsibilities. The Business plan is reviewed by the Board of Directors.

The responsibilities of each of the key-functions holders are summarised below.

- The Head of Risk, being a Board of Directors' member, attends the Board of Director's meetings and the Audit Risk & Compliance Committee meetings and has responsibility for the development and review of the risk management system, governance system and internal control system; implementation of risk management processes and systems; reporting on the risk profile of the business, preparation and presentation of the Own Risk and Solvency Assessment (ORSA).
- The 2<sup>nd</sup> line Actuary attends of the meetings of the Board of Directors at which his reporting is on the agenda. The 2<sup>nd</sup> line Actuary oversees all actuarial aspects of strategy and financial management. Oversight of the appropriateness of methodologies, models, bases of calculation of technical provisions; assessment of the sufficiency and quality of the data used in the calculation of technical provisions; reporting on the reliability and adequacy of the calculation of technical provision; advising of any concerns regarding the sufficiency of financial assets to meet liabilities to policies; the modelling of risk capital for the ORSA, including advising on suitable stress and scenario testing; reinsurance arrangements; oversight of investment strategy and asset-liability matching.
- The Head of Internal Audit provides reporting to the Board of Directors and directly to the Chair of the Audit Risk & Compliance Committee and is responsible for providing reasonable assurance to the Board of Directors and the Audit Risk & Compliance Committee about the adequacy and effectiveness of the internal control environment including procedures, controls and policies and for the establishment of an annual audit plan.
- The Head of Compliance provides reporting to the Board of Directors and directly to the Chair of the Audit Risk & Compliance Committee and is responsible for ensuring that the company fulfils its regulatory, legislative, and corporate standards and obligations and for assessing the adequacy of measures taken to prevent non-compliance. The Head of Compliance is also responsible for upholding sanction and anti-money-laundering measures.

### B.1.2 Material changes in the system of governance

Not applicable, since AEL started its operations in 2020.

### B.1.3 Information on the remuneration Policy

The Board of Directors, management and employees of AEL are employed by Assurant Europe Services BV (AES). AEL and AES are under common management and AES applies the same practices that would have applied if management and employees would have been employed by AEL directly.

The Remuneration policy for the Board of Directors is set by the Annual General Meeting. The periodical determination of its remuneration is set by the Supervisory Board, in accordance with that Remuneration policy.

The Board of Director's, management and employees are remunerated as follows:

- Fixed remuneration, based on a (group wide) benchmark / role content basis.
- Variable remuneration, based on personal and company financial performance, such within the local legal limits applying (performance related variable remuneration up to 20% of fixed/guaranteed income).

Variable remuneration is not deferred.

Supervisory Board Members receive a fixed fee.

### B.1.4 Transactions with shareholders, with persons who exercise a significant influence on the undertaking, and with members of the administrative, management or supervisory body.

The company entered into the following transactions with its shareholder:

1. A capital contribution of Euro 5,395,000 on 20 May 2020
2. A contribution into share premium reserve of Euro 2,200,000 on 18 September 2020

These transactions occurred in the process of obtaining a license to operate as an insurer (of DNB) and to obtain approval of the PRA to assume the EU portfolios of London General Life Insurance Company Ltd and Assurant Life Insurance Company Ltd.

### B.1.5 Assessment of the adequacy of the system of governance

The system of governance is set up in accordance with Solvency 2 guidelines and the design is assessed on an annual basis. The Board of Directors reviews effectiveness of the system of governance on a periodical basis. This review comprises the following:

- An annual attestation by management of the Company with regards to the proper functioning of policies within the Company.
- Review of the quarterly reporting of the Key Function Holders (Head of Risk, Actuarial function, Head of Compliance, Head of internal audit), which reporting provides insight into functioning of policies and guidelines, both in terms of adherence as in terms of breaches and incidents.
- Incidental reviews requested by regulators, which entail a detailed review of certain aspects of the governance framework.
- Obtaining feedback from the Internal and External audit functions with regards to their opinions on the functioning of the governance framework.

Key Function Holders and External audit have direct access to the Audit Risk & Compliance Committee and the Supervisory Board to share any concerns they may have about the governance framework.

## B.2 Fit and proper requirements

The company has a Fit and proper policy that addresses that appropriate resource are in place to deliver effective and efficient management of the business. The Company takes appropriate steps to ensure that (senior) managers, individuals responsible for key functions and those working in key functions are fit and proper to carry their responsibilities. The requirements are proportionate to the role and responsibilities of the position. Checks are made on initial appointment and are re-assessed when deemed required. The results of all assessments are reported to the Board of Directors. For new employees, these tests included some or all of the following:

- Criminal record checks.
- Credit referencing.
- Curriculum Vitae detailing skills, qualifications and experience.
- Continuous professional development / performance management framework.
- Membership of professional institutes.
- The recruitment and selection process in place at the time of appointment.
- Permanent education requirements, which are reported on quarterly and monitored by the Compliance Officer.

## B.3 Risk management system including the own risk and solvency assessment

### B.3.1.1 Risk Management System

AEL has an established a risk management system which comprises:

- (a) a strategy;
- (b) risk management and internal control policies;
- (c) a risk management processes;
- (d) control activities.

In addition, it includes a risk management system review; reporting and disclosure; independent assurance and regulatory compliance monitoring.

The risk management system applies to all categories of risk, and, unless stated otherwise, the following information applies for each separate risk category.

### B.3.1.2 Risk management strategy

AEL's risk management strategy ensures that the company's risk appetite is not exceeded. Risks are assessed, defined and approached in one of the following four ways, depending on the nature of the risk and related circumstances:

- Risk acceptance: AEL accepts risks that fall within the boundaries/limits defined in the risk appetite statement. Any risk falling outside the specified limits or boundaries is reviewed to ascertain if the risk appetite requires updating or if an exception should be granted.
- Risk reduction/minimisation: these activities generally relate to control and mitigation activities, and therefore this strategy may include, amongst others, any or all of the following: the design of new process or accounting controls, contracting controls, changes in product design, improvement in a set of Terms and Conditions, or other changes designed to control and/or mitigate risk.
- Risk transfer: risk is transferred principally through reinsurance agreements. These may include, but are not limited to stop loss, excess of loss, quota share, or other such treaties. Other types of risk transfer can also be considered.
- Risk Avoidance: where an activity is outside the risk appetite of the AEL, AEL will seek to avoid exposure to that type of risk.

### B.3.1.3 Process

AEL implemented the three lines of defence model and enforces the requirement for first line management of risk, with oversight and challenge from the second line risk and compliance functions and third line internal audit function confirmation, as follows:

Oversight	Supervisory Board	<ul style="list-style-type: none"> <li>Supervisory Board - independent oversight of Board of Directors</li> </ul>
Responsibility	Board of Directors	<ul style="list-style-type: none"> <li>Establishes risk appetite and strategy</li> <li>Responsible for 1<sup>st</sup> and 2<sup>nd</sup> line activities</li> </ul>
3rd Line of Defence	Internal Advisory Services (Internal Audit)	<ul style="list-style-type: none"> <li>Provides independent assurance on the effectiveness of first and second line of defence functions</li> </ul>
2nd Line of Defence	Risk Management Function Compliance Function Actuarial Function	<ul style="list-style-type: none"> <li>Design, interpret and develop overall risk management framework</li> <li>Overview of AEL risk registers</li> <li>Monitor controls in place against key risks</li> <li>Challenges risk mitigation and acceptance</li> <li>Reports on risk exposures, issues, mitigations, and resolutions</li> </ul>
1st Line of Defence	Business / Functions	<ul style="list-style-type: none"> <li>Executive risk owners</li> <li>Owner of the risk management process</li> <li>Identifies, manages, and mitigates risks</li> <li>Identifies, manages, and reports on issues</li> </ul>

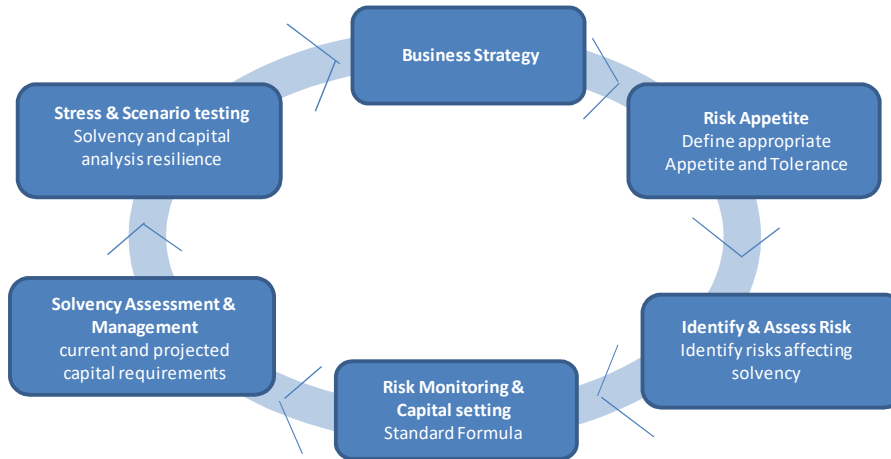

Business areas are responsible for completing quarterly Risk and Control Self-Assessments (RCSA's) which contribute to the Risk Register of the business.

### B.3.2 Own Risk and Solvency Assessment

AEL annually conducts an Own Risk and Solvency Assessment (ORSA). This assessment considers the company's strategy, its operating environment and the risks to which it is exposed and results in a forward-looking assessment of the potential risks and capital impacts which the company uses to assess its current and future capital needs.

#### ORSA Process

The table below show the steps in the ORSA process.

## B.4 Internal control system

### B.4.1 Description of system of internal control

AEL’s internal control system is designed to provide reasonable assurance that its reporting is reliable, compliant with applicable laws and regulations and its operations are effectively controlled.

The Company operates a “three lines of defence model” for the management of risks and performance of internal control, which is adapted and applied for a company of the size and complexity of AEL. This is illustrated in the overview below. Broadly this means that the risk function is responsible for providing a framework for risk management and internal control, the business functions are responsible for implementing the framework and the Internal audit function is responsible for independently validating the appropriateness of both the design and its implementation. The actuarial and compliance functions also provide second line challenge, oversight and assurance.

## B.4.2 Implementation of the compliance function

The Compliance Function operates within Assurant group's broader risk management framework and:

- is responsible for oversight and monitoring of compliance risk management and related control systems.
- supports the Board of Directors in managing compliance risks and embedding a culture of integrity in the organisation.
- develops the enterprise compliance strategy, structure, and processes of adherence to ethical standards and applicable rules and regulations.
- supports implementation of the compliance program and establishes and maintains effective compliance management and control systems.

The Compliance Function is independent of and takes an objective view on the operational activities of AEL. It provides timely advice to the Board of Directors or, where applicable the Supervisory Board on compliance related matters. If and when potentially significant misconduct in connection with AEL's business is detected, it ensures that reasonable steps are taken to respond to and resolve the (potential) misconduct. It oversees effective whistleblowing reporting channels and conducts or coordinates internal investigations of compliance violations. It develops and implements compliance policies and procedures, education, and trainings, and keeps abreast of regulatory and industry trends.

At least on an annual basis, the Compliance Function will draft the compliance plan, which describes the monitoring activities which the Compliance Function will perform, considering the risk ratings, supervisor priorities and audit results. The monitoring activities will be executed accordingly.

## B.5 Internal audit function

### B.5.1 Description of how the internal audit function is implemented

AEL's Head of Internal Audit (HoIA) is responsible for internal audit activities, in coordination with Assurant Inc.'s group Internal Audit Services (IAS) function. The HoIA is accountable to the Audit Risk & Compliance Committee (ARCC) of the Supervisory Board and has administrative responsibility to AEL's Chief Executive Officer.

The HoIA is responsible for regularly assessing the adequacy of governance, risk management and the internal controls system and reports his findings to the ARCC of the SB.

Internal audit activities are coordinated with IAS as to ensure coordination of audit plans, coordination of resource planning, alignment on audit process, reporting and follow-up monitoring.

The annual (3-year cycle) audit plan is prepared and submitted to the SB for review and confirmation. Upon confirmation, the HoIA distributes the plan to business leaders and executes the plan during the course of the audit plan period. Additionally, at HoIA discretion or at the request of the ARCC, or management, other unannounced audits may be performed.

Initially the entire risk universe is considered during annual audit planning and subsequent revisions to plan, the highest-risk items are included as risk-based audits. Certain processes, while not rising to a level of significant risk, are still included on a cyclical basis to ensure breadth of coverage over a span of time.

Secondly, risks associated to the audit are identified and their mitigation evaluated via an assessment of the design and operational effectiveness of key internal controls, information systems, governance, risk management, and financial reporting supplemented where necessary by a programme of testing, creating audit programs for every project.

## B.5.2 Description of how the internal audit function maintains independence and objectivity

The Internal audit function's mandate and responsibilities are documented in the Internal Audit Charter. It defines the framework for the activities of the Internal Audit function and is approved by the Supervisory Board. The charter allows Internal audit to be independent of the functions audited and it provides full, free, and unrestricted access to all operations, records, property, and personnel. Additionally, it provides the authority to allocate resources, set frequencies, select subjects, determine scope of work, and apply the techniques required to accomplish audit objectives.

## B.6 Actuarial function

The Board of Directors appoints the Actuarial Function Holder. The holder needs to meet the fit and proper requirements and hold an appropriate practicing certificate from the Actuarial Society (Actuariel Genootschap) or a comparable foreign qualification.

The Actuarial Function Holder reports to the Head of Risk for management purposes but has a line of escalation to the Supervisory Board (via the Audit Risk & Compliance Committee).

The responsibilities of the Actuarial Function Holder are defined in a Charter. As part of ensuring responsibilities are carried out in an effective and efficient manner, the Actuarial function operates in close cooperation with the members of the 1<sup>st</sup> line actuarial function team.

The Actuarial Function Holder coordinates the calculation of technical provisions, provides opinions on the underwriting policy and reinsurance arrangements, and contributes to the effectiveness of the risk management system.

The actuarial function is responsible for the process of calculating the technical provisions, as well as for the calculation of the SCR, MCR and ORSA capital. In addition, the actuarial function is responsible for reviewing and calculating the appropriateness of insurance product pricing and contributing to the governance committees, capital initiatives and regulatory returns where appropriate.

The Actuarial Function Holder provides quarterly updates and an annual report to the Board of Directors and the Supervisory Board, detailing the methodology, assumptions, and results of its work.

## B.7 Outsourcing

AEL operates as part of the Assurant group and is tightly linked to the European operations. The company does not employ staff itself but instead benefits from shared services centres and centres of excellence and has entered into service agreements with the group entities that provide these services.

In the Netherlands, Assurant employees are employed by Assurant Europe Services B.V., a group company under the same management as AEL. The activities of these employees are not considered "outsourcing".

AEL distinguishes between two types of outsourcing:

- activities for which the Board of Directors cannot outsource functional responsibility but for which AEL makes use of individuals and infrastructure that are employed or owned by other group entities. These activities are managed as if directly employed / owned by AEL and are not considered "outsourcing".
- Activities for which functional responsibility can be outsourced and which is considered critical or important outsourcing as defined by Solvency 2 definitions.

AEL's Outsourcing policy sets the standards and controls required for selection of internal and external service providers as well as the requirements for ongoing management of such providers, with the aim of ensuring adequate oversight and governance of performance.

Critical or important outsourced functions are:

Outsourced Function	Outsourced to

## B.8 Any other disclosures

None.

## C Risk management

The sections below provide a qualitative and quantitative summary of the risk profile for each category of risk. Where information is specific to each risk category it has been set out under the relevant heading. Where the information is common across all risk categories it has been included in Section C.7.

AEL is mostly exposed to counterparty default risk and secondly to non-life underwriting risk. This is a consequence of having a very small insurance portfolio against which funds are held for the volume of the AMCR and a buffer. As AEL invests in government bonds and holds cash at bank, the counterparty default risk becomes the dominant risk. The chart below shows the distribution of the gross SCR by risk module (excluding the diversification effects between the risk modules) as per year-end.

A further breakdown of market and non-market risk capital requirements is provided in the following sections.

### C.1 Underwriting risk

#### C.1.1 Qualitative review of risk profile

##### Underwriting risk - life

AEL is exposed to the risk of having to pay more mortality claims or incur higher than expected average costs per claim (mix of sums insured) than foreseen when pricing its insurance products.

##### Underwriting risk - disability-morbidity

AEL is exposed to disability-morbidity risk; the probability of having to pay out more benefits due to increased disability-morbidity.

In case of annuities, disability-morbidity risk carries the possibility of recovery, meaning insureds can recover from their illness and benefits can cease to be paid at that point.

AEL did not write policies on a standalone basis, but as wrappers to consumer borrowing arrangements, like mortgage loans or consumer credits, meaning they were less exposed to disability-morbidity risk compared to insureds that had a health driven incentive to buy protection.

##### Underwriting risk - expense

AEL is exposed to expense risk. This arises if future expenses turn out to be higher than expected or higher than that provisions are carried for. Cost increases have different causes, such as non-recurring regulatory change costs, or recurring inflation increases. This risk can be mitigated only partially.

## Underwriting risk - revision

Revision risk applies to annuity insurances where the benefits ‘could increase because of changes in inflation, the legal environment or the state of health of the person insured.’ AEL’s insurances do not provide such benefits; therefore, this risk is not applicable.

## Underwriting risk - lapse

Lapse risk arises mainly due to the loss of future income if lapses are higher than expected. Lapse risk can be driven by external events such as an economic recession or by internal factors such as poor customer service delivery.

## Underwriting risk - catastrophe

In some territories AEL is exposed to this risk, for example due to floods or windstorm. This risk is generally remote.

### C.1. Quantitative review of risk profile

The graphs below show the underwriting risk profile of the Company using the risk capital requirements calculated by the standard formula as at 31 December of the current year.

Most of the Underwriting risk SCR is made up by expense risk (life). This is due to the fact that the small portfolio needs to carry the cost to operate the legal entity. Since AEL is in run-off it carries a provision for all costs associated with that run-off. Stressing that provision has a relatively large impact.

Life catastrophe risk is the 2<sup>nd</sup> largest item due to not having access to all necessary risk location data, following which all life catastrophe risks are taken into account for the SCR calculation, even when in reality such risk may not exist.

#### C.1.3 Risk mitigation Techniques

The below table sets out the techniques used for mitigating (material) risks and the processes used for monitoring their continued effectiveness.

As AEL is a business in run-off, it can no longer make changes to its risk profile by adjusting underwriting. Instead, AEL will periodically consider whether to manage risk in-house (at own cost and own capital strain) versus placing such risks externally, for example via reinsurance.

Risk Category	Key Controls and Risk Mitigation Techniques
Underwriting risk - Life reserve risk (mortality)	<ul style="list-style-type: none"> <li>▪ Regular experience investigations and monthly review of programs avoid insufficient technical provisions.</li> <li>▪ Emerging risk reviews focus on market developments that may prove a program under-reserved.</li> <li>▪ If and when deemed required, concluding a stop loss reinsurance agreement.</li> </ul>
Underwriting risk - Disability & Morbidity risk (SLT Health)	<ul style="list-style-type: none"> <li>▪ Regular experience investigations, and industry analysis, to support best estimate assumptions and identify trends.</li> <li>▪ Emerging risk reviews focus on market developments that may prove a program under-reserved.</li> <li>▪ If and when deemed required, concluding a stop loss reinsurance agreement.</li> </ul>
Expense Risk	<ul style="list-style-type: none"> <li>▪ Stringent regime of budgetary control, monitored as part of the annual planning and quarterly reporting cycles.</li> <li>▪ Outsourcing strategy keeps costs variable.</li> </ul>
Lapse Risk	<ul style="list-style-type: none"> <li>▪ Regular experience investigations to support best estimate assumptions and identify trends.</li> <li>▪ Stringent management of customer service delivery and adherence to treating customers fairly (TCF) principles.</li> </ul>
Catastrophe Risk	<ul style="list-style-type: none"> <li>▪ Given low actual exposure to this risk, no specific mitigation measures are in place.</li> </ul>

## C.2 Market risk

### C.2.1 Qualitative review of risk profile

Market risk emerges in different ways. It arises directly, because of interest rate and spread movements or exchange rate movements but also due to a loss of funds if a debtor is not able to repay its debt. This indirect risk is credit risk is treated in section C.3.

AEL does not seek market risk to increase revenue or profit but rather incurs it as a consequence of having to invest funds to cover policyholder liabilities and hold capital for regulatory purposes.

Included within market risk are:

Risk category	Description
Interest Rate Risk	Interest risk is inherently present. Given that a major part of AEL's assets are bonds, interest fluctuations will impact these assets' values. Fluctuations in interest rates also affect liabilities' values. The overall impact of interest risk is therefore depending on how well the assets and liabilities are matched.
Spread Risk	AEL does not invest in corporate bonds and is not exposed to spread risk.
Currency Risk	Currency risk emerges when currencies lose value compared to the Euro, the companies reporting currency. AEL only operates in the European Union, and therefore its exposure to currency risk is limited.

Equity risk	AEL had no exposure to equity risk as at 31 December 2020.
Property Risk	AEL had no exposure to property risk as at 31 December 2020.

### C.2.2 Quantitative review of risk profile

The year end 2020 position was such that the SCR for market risk is Euro nil. The net interest sensitive position is negative and below ten years of maturity meaning that neither the upward nor the downward stress result in a capital requirement. Investments are only held in government bonds which do not attract a spread risk and concentration risk SCR. Currency-risk is nil as AEL only operates in Euro-countries.

### C.2.3 Risk mitigation

The below table sets out the techniques used for mitigating risks and the processes used for monitoring their continued effectiveness.

Risk Category	Key Controls and Risk Mitigation Techniques
Interest Risk	Matching of assets and liabilities to reduce the impact of adverse interest rate movements.
Spread risk	Not applicable.
Concentration Risk	Not applicable.
Currency Risk	Not applicable.

The company does not use any derivatives or other specific risk mitigation instruments to manage its market risk exposure.

### C.2.5 Assets invested in accordance with the Prudent person principle.

#### C.2.5.1 Prudent Person Principle

The Company holds assets to back its various liabilities and its shareholder funds. Through pro-active investment management the Company can achieve an appropriate level of investment return. Achieving an appropriate level of investment return is not the sole aim though, as the Company needs to keep the risks within its risk tolerance limits, which are set with the aim to achieve pay outs in line with policyholders' reasonable expectations.

The Company has a limited risk appetite to incur losses on investments that are held to cover policyholder liabilities. These investments are held to match the best estimate cash outflows and returns on funds are of lower priority (since the liabilities do not hold guarantees and are discounted against the (very low) EIOPA curve).

The Company has a higher risk appetite for invested shareholder funds. For these, return on investment has a higher priority and with that comes a more positive risk appetite towards credit and spread risk.

Finally, the Company has a limited risk appetite for liquidity risk and concentration risk. Subsequently, when setting the asset mix and determining suitable investments it is important to maintain a minimum level of cash holdings and to ensure that the company does not invest too much with a single counterparty, for which strict limits exist.

### C.2.5.2 Investment management

The Board of Directors is responsible for ensuring that the controls for investment management are appropriate and effective. As such the board is responsible for the approval of the Investment policy and oversight of its operation. This includes signing off major changes in the approach used for investment management. At AEL, also the Supervisory Board signs off the Investment policy.

## C.3 Credit risk

### C.3.1 Qualitative review of risk profile

Two types exposures are distinguished:

#### Type 1

The Company holds significant amounts of funds with banks in The Netherlands. Counterparty default risk would emerge if one or more of these banks would not be able to repay the balances held.

The Company has placed only insignificant reinsurance with certain reinsurers.

#### Type 2

The company has small amounts due from intermediaries.

Spread risk, reflecting credit risk on the corporate bond portfolio, is treated in paragraph C.2.

### C.3.2 Quantitative review of risk profile

The graphs below show the credit risk profile of the Company using the risk capital requirements calculated by the standard formula as at 31 December.

The capital is held almost entirely for type 1 exposures to banks (which are Globally Systemic Important Banks). Spread risk is not applicable.

Type 2 exposure is small as the portfolio is in run-off.

### C.3.3 Risk mitigation

The below table sets out the techniques used for mitigating risks and the processes used for monitoring their continued effectiveness.

Risk Category	Key Controls and Risk Mitigation Techniques
Credit and counterparty default	<ul style="list-style-type: none"> <li>▪ Operation of controls which limit the level of exposure to any single counterparty and impose limits on exposure by credit rating.</li> <li>▪ Bank accounts held with GSIB's.</li> </ul>

## C.4 Liquidity risk

Liquidity risk is defined as the risk that the company will have insufficient liquid assets available to meet liabilities as they become due.

### C.4.1 Qualitative review of risk profile

Liquidity risk arises when cash outflows to policyholders or pay-out patterns deviate from expectations, or when cash outflows are not properly matched by cash inflows. The company holds all its invested assets in liquid instruments (cash at bank and government bonds) which are directly or almost directly available, therefore liquidity risk is not considered a major residual risk.

Other liquidity issues could arise from counterparty default risk (see section C.3).

### C.4.2 Quantitative review of risk profile

Given the very large excess of liquid investments over policyholder liabilities, no further details are provided.

### C.4.3 Risk mitigation

The below table sets out the techniques used for mitigating risks and the processes used for monitoring their continued effectiveness.

Risk Category	Key Controls and Risk Mitigation Techniques
Liquidity	<ul style="list-style-type: none"> <li>▪ Funds held at GSIB banks with limits per institution.</li> <li>▪ Investment policy prescribes investment in liquid assets.</li> <li>▪ Quarterly cash flow forecasts to anticipate funding requirements over the following three months and considering wider funding requirements from the business planning and/or group dividend payments.</li> <li>▪ Weekly / monthly / quarterly treasury reporting showing the liquid assets held and how these compare to the minimum threshold set in the Investment policy.</li> </ul>

### C.4.5 Expected Profit in Future Premiums

As required by Article 260(2) of the S2 Directive, the company calculated the amount of expected profit in future premiums included in the best estimate technical provisions which is nil, due to no premium of significance being received post 31 December.

## C.5 Operational risk

### C.5.1 Qualitative review of risk profile

The company typically carries the same operational risks as most insurers. Operational risks manifest themselves in a wide variety of forms. The company is considered to be most exposed to IT-related risks (continuity of processing, data security, data privacy), regulation related risks (changes in regulation that increase the cost base or changes in regulations that are applied retro-actively and for which no means of compensation exists).

Operational risks are assessed periodically and captured in a risk register.

### C.5.2 Quantitative review of risk profile

In the first section of this chapter C, a graph shows the distribution of the four main risk groups that are part of the BSCR, including operational risk, calculated by the standard formula as at 31 December of the current period. This graph shows that operational risk is, from a quantitative perspective, insignificant in the total risk profile of the Company. Whilst the company is exposed to many operational risks and has quantified the (external) cost of these scenarios, these costs do not exceed the capital charges for the other risk categories defined in the standard model.

### C.5.3 Risk mitigation

The below table sets out the techniques used for mitigating risks and the processes used for monitoring their continued effectiveness

Risk Category	Key Controls and Risk Mitigation Techniques
Operational risk	<ul style="list-style-type: none"> <li>▪ Close oversight of the performance and risk management of (IT-) service providers.</li> <li>▪ SOC 2 review of major IT applications.</li> <li>▪ Ongoing monitoring and testing of business continuity plans.</li> <li>▪ (Preventive) health and safety measures are in place.</li> <li>▪ Remote work facilities.</li> </ul>

## C.6 Other material risks

As per the date of this report, the financial outlook for 2021 remains uncertain and dependent on the success of the various COVID19 vaccination programs existing in the company's main markets, The Netherlands, Belgium, Spain, Germany and Ireland. The Creditor portfolio is exposed to mortality and disability risk and whilst in 2020 it has not seen large impacts for these risks, 2021 may take another path.

## C.7 Any other disclosures

### C.7.1 Risk mitigation techniques and monitoring

#### Risk assessment

Section B.3.1 sets out the Risk management framework of the Company and section B.3.2 explains how the Company carries out its Own Risk and Solvency Assessment (ORSA). This provides the framework by which individual risks are identified, assessed, monitored and managed. As part of this framework, the Company quantifies the capital impact of different risks by:

- Determining the risk capital requirements using the standard formula as part of the quarterly financial reporting cycle.
- Performing additional stress and scenario testing to support the ORSA.

An assessment is carried out on an annual basis to confirm that the standard formula remains appropriate for establishing the regulatory capital requirements for the Company. This assessment is approved by the Board of Directors.

## C.7.2 Stress testing and sensitivity analysis

### C.7.2.1 Overview

The Company uses the standard formula to determine its regulatory capital requirements, and these are calculated and reported on a quarterly basis. As part of the Own Risk and Solvency Assessment (ORSA) the Company performs a forward-looking assessment of its ability to meet the regulatory capital requirements under a range of stresses and scenarios.

Full details of the stresses and scenarios, the methodologies used and the results are included in the ORSA report will be submitted to DNB.

### C.7.2.2 Methodology

The stress and scenario tests have been carried out with a base date of 31 December 2020.

In quantifying the financial impact of each stress, it is assumed that each stress occurs immediately after the year-end, i.e., at 1 January 2021.

After applying the stress, risk capital is recalculated in accordance with the standard formula in order to re-establish the regulatory capital requirements.

### C.7.2.3 Outcomes from the stress and scenario testing

Each stress and scenario test was performed using the methodology described above, and the Solvency ratio was compared to the base financial position. The analysis concluded that the amount of available capital at 31 December 2020 is sufficient to withstand the stresses and scenarios adopted by the Board of Directors.

## D Valuation for Solvency purposes

This section of the Solvency and Financial Condition Report shows how the assets and liabilities of the Company have been valued, both for solvency and statutory reporting purposes. The below table summarises the Own funds (as measured on a solvency basis) and net assets (as measured on a statutory basis) and provides a reference where further information is provided:

€'000		Solvency 2	Statutory
Assets	Section D.1	12.942	12.942
Technical provisions	Section D.2	-2.527	-2.527
Other liabilities	Section D.3	-2.744	-2.744
<b>Own funds / net assets</b>		<b>7.670</b>	<b>7.670</b>

### D.1 Assets

The table below shows each class of asset with Solvency 2 value and the statutory account value:

	Section	Solvency II value	Statutory accounts
		C0010	C0020
<b>Assets</b>			
R0010 Goodwill			0
R0020 Deferred acquisition costs			0
R0030 Intangible assets		0	0
R0040 Deferred tax assets		0	0
R0050 Pension benefit surplus		0	0
R0060 Property, plant & equipment held for own use		0	0
R0070 Investments (other than assets held for index-linked and unit-linked contracts)		4.645.824	4.603.245
R0080 Property (other than for own use)		0	0
R0090 Holdings in related undertakings, including participations		0	0
R0100 Equities		0	0
R0110 Equities - listed		0	0
R0120 Equities - unlisted		0	0
R0130 Bonds	<b>D 1.1</b>	4.645.824	4.603.245
R0140 Government Bonds		4.645.824	4.603.245
R0150 Corporate Bonds		0	0
R0160 Structured notes		0	0
R0170 Collateralised securities		0	0
R0180 Collective Investments Undertakings		0	0
R0190 Derivatives		0	0
R0200 Deposits other than cash equivalents		0	0
R0210 Other investments		0	0
R0220 Assets held for index-linked and unit-linked contracts		0	0
R0230 Loans and mortgages		0	0
R0240 Loans on policies		0	0
R0250 Loans and mortgages to individuals		0	0
R0260 Other loans and mortgages		0	0
R0270 Reinsurance recoverables from:		33.331	33.331
R0280 Non-life and health similar to non-life		0	0
R0290 Non-life excluding health		0	0
R0300 Health similar to non-life		0	0
R0310 Life and health similar to life, excluding health and index-linked and unit-linked	<b>D 2</b>	33.331	33.331
R0320 Health similar to life		4.681	33.331
R0330 Life excluding health and index-linked and unit-linked		28.651	0
R0340 Life index-linked and unit-linked		0	0
R0350 Deposits to cedants		0	0
R0360 Insurance and intermediaries receivables	<b>D 1.2</b>	154.546	154.546
R0370 Reinsurance receivables	<b>D 1.3</b>	34.152	34.152
R0380 Receivables (trade, not insurance)	<b>D 1.4</b>	16.315	58.894
R0390 Own shares (held directly)		0	0
R0400 Amounts due in respect of own fund items or initial fund called up but not yet		0	0
R0410 Cash and cash equivalents	<b>D 1.5</b>	8.058.080	8.058.080
R0420 Any other assets, not elsewhere shown		0	0
R0500 <b>Total assets</b>		<b>12.942.248</b>	<b>12.942.248</b>

The following table provides the differences between the value of total assets between the statutory financial statements and the column statutory values in Schedule 02.01:

	Row	2020
€'000		
Total assets in statutory financial statements	R0500	12.908.917
Reclassification of reinsurance share of technical provisions (statutory deducted from liabilities)	R0280	33.331
<b>Total assets in statutory column in Schedule 02.01</b>		<b>12.942.248</b>

### D 1.1 Bonds

Bonds are measured at fair value.

The difference between the Solvency 2 and statutory value of investments is due to a difference in the classification of accrued investment income, which is recognised within Investments in Solvency 2 and within Other assets in the statutory financial statements.

	Row	2020
€'000		
Bonds in the statutory accounts	R0130	4.604
Reclassification of accrued interest to Bonds	R0380	43
<b>Bonds in Solvency 2</b>		<b>4.646</b>

### D 1.2 Insurance and Intermediaries receivables

Insurance and intermediary receivables are measured at the undiscounted amount of the cash or other consideration expected to be received, net of any allowance for impairment.

### D 1.3 Reinsurance receivables

Reinsurance receivables are measured at the undiscounted amount of the cash or other consideration expected to be received, net of any allowance for impairment.

### D 1.4 Receivables trade (not insurance)

Trade receivables are measured at the undiscounted amount of the cash or other consideration expected to be received, net of any allowance for impairment.

	Row	2020
€'000		
Receivables (trade not insurance) in statutory accounts	R0380	59
Reclassification of accrued interest to Bonds	R0130	-43
<b>Receivables (trade, not insurance) in Solvency 2</b>		<b>16</b>

## D 1.6 Cash and cash equivalents

Cash and cash equivalents include cash in hand, deposits held at call with banks and other short-term highly liquid investments and are measured at fair value. Highly liquid is defined as having a short maturity of three months or less at acquisition.

## D 2 Technical provisions

The following table shows the net technical provisions under Solvency 2 and the statutory financial statements.

	Solvency II value	Statutory accounts value
	C0010	C0020
<b>Liabilities</b>		
R0510 Technical provisions – non-life	0	0
R0520 Technical provisions – non-life (excluding health)	0	0
R0530 Technical provisions calculated as a whole	0	
R0540 Best Estimate	0	
R0550 Risk margin	0	
R0560 Technical provisions - health (similar to non-life)	0	0
R0570 Technical provisions calculated as a whole	0	
R0580 Best Estimate	0	
R0590 Risk margin	0	
R0600 Technical provisions - life (excluding index-linked and unit-linked)	2.527.372	2.527.372
R0610 Technical provisions - health (similar to life)	454.497	1.338.434
R0620 Technical provisions calculated as a whole	0	
R0630 Best Estimate	453.375	
R0640 Risk margin	1.122	
R0650 Technical provisions – life (excluding health and index-linked and unit-linked)	2.072.875	1.188.938
R0660 Technical provisions calculated as a whole	0	
R0670 Best Estimate	2.045.398	
R0680 Risk margin	27.477	
R0690 Technical provisions – index-linked and unit-linked	0	0
R0700 Technical provisions calculated as a whole	0	
R0710 Best Estimate	0	
R0720 Risk margin	0	
<b>Assets</b>		
R0270 Reinsurance recoverables from:	33.331	33.331
R0280 Non-life and health similar to non-life	0	0
R0290 Non-life excluding health	0	0
R0300 Health similar to non-life	0	0
R0310 Life and health similar to life, excluding health and index-linked and unit-linked	33.331	33.331
R0320 Health similar to life	4.681	33.331
R0330 Life excluding health and index-linked and unit-linked	28.651	0
R0340 Life index-linked and unit-linked	0	0
<b>Net technical provisions</b>	<b>2.494.041</b>	<b>2.494.041</b>

### D 2.1 Bases, methods, and main assumptions

Under Solvency 2, liabilities must be valued at the amount for which they could be transferred between two knowledgeable parties.

Technical Provisions are defined as the sum of a best estimate and a risk margin. The best estimate is the probability weighted mean average of all future cash-flows and the risk margin is the cost of providing the solvency capital required necessary to support these best estimate liabilities.

The following principles were applied for compiling the Solvency 2 technical provisions:

- The liabilities valued in the technical provisions are those associated with existing contracts at the valuation date.

- The life business technical provisions of AEL are computed using policy by policy life valuation models for the premium provision.
- This is carried out by projecting the expected cash-flow for each policy for each future month until all existing contracts have expired.
- Expenses are projected as for the technical provision cash flow projections.
- The best estimate is calculated separately for the premium provision and claim provision. Premium provisions are computed as above and claims provisions mainly represent claims in course of payment (plus an allowance for claims which have been incurred but which have not yet been reported to AEL). These claims provision include an allowance for unallocated loss adjustment expenses.
- Gross cash-flows are calculated separately from reinsurance cash flows, to recognize that there could be significant differences in the timing of these cash flows.
- The assumptions underlying the calculation of the technical provisions are derived based on the assumption that AEL will continue to write new business (going concern assumption). A separate run-off provision is presented in row R0750 (Provisions other than technical provisions).
- A yield curve is required to discount future cash flows. This is the EOIPA provided curve per currency (no VA or MA applied).

## D 2.2 Level of uncertainty

There are several areas of uncertainty in the calculation of the technical provisions. Reserving is carried out using actuarial methods of projecting the paid (or known) claims to estimate the reserve required to pay claims in course of payment (plus an adjustment for claims incurred but not yet reported to AEL). These methods are generally based on the assumption that claim durations and reporting delays can be predicted based on historic experience. There is uncertainty in this due to changes in handling processes and mortality trends for older demographics within the policy set.

The main uncertainties concern:

- Lapse patterns. Early surrenders lead to premium reimbursements and loss of income.
- Expense developments. Higher than expected inflation or industry specific costs, such as those of regulation, could negatively impact the company's future financial position.

## D 2.3 Differences between Solvency 2 and the statutory financial statements

There are no differences between Solvency 2 and the statutory financial statements.

### D 2.3.1 Premium and claim provision

The Premium and claim provisions are based on the probability weighted average of future cash flows related to the policies, within contract boundaries.

### D 2.3.2 Risk Margin

For Solvency 2 a risk margin is determined using a cost of capital approach which involves calculating the cost of holding the SCR per Standard formula calculation at each future time period until the technical provisions at the reporting date have run off. The amounts are then discounted back to the current time period. The calculation excludes new business and market risk. AEL determines its risk margin by projecting the SCR in line with the run off of best estimate liabilities (method 2).

### D 2.3.3 Discounting

The best estimate technical provisions are discounted against the EIOPA provided curve (no VA and no MA).

## D 2.4 Use of Long-term guarantee package

- AEL has not applied the matching adjustment referred to in Article 77b of Directive 2009/138/EC.
- AEL has not used the volatility adjustment referred to in Article 77d of Directive 2009/138/EC
- AEL has not applied the transitional risk-free interest rate-term structure referred to in Article 308c of Directive 2009/138/EC.
- AEL has not applied the transitional deduction referred to in Article 308d of Directive 2009/138/EC.

## D 2.5 Reinsurance

Reinsurance recoverables represent the net discounted cash flow expected to be received from AEL's reinsurers. AEL only uses facultative reinsurances, primarily quota share, to cede risk on particular programs.

## D 2.6 Material changes in the relevant assumptions made in the calculation of technical provisions

AEL prepared a SFCR for the first time, hence not applicable.

## D.3 Other liabilities

The table below shows the other liabilities as per 31 December:

	Section	Solvency 2	Statutory
€'000			
Provisions other than technical provisions	D 3.1	2.287	2.287
Insurance & intermediary payables	D 3.2	292	292
Payables (trade)	D 3.3	166	166
<b>Other liabilities</b>		<b>2.744</b>	<b>2.744</b>

### D 3.1 Provisions other than technical provisions

This provision is carried to ensure an orderly run-off of the portfolio in-force. It covers future legal entity maintenance costs (discounted at EIOPA curve) until expiry or earlier divestment/conversion of the remaining portfolio.

### D 3.2 Insurance and Intermediaries payables

Insurance and intermediary payables are measured at the undiscounted amount of the cash or other consideration expected to be paid.

### D 3.3 Payables (trade, not insurance)

Payables are measured at the undiscounted amount of the cash or other consideration expected to be paid.

## D.4 Alternative methods for valuation

No alternative methods of valuation were used.

## D.5 Any other disclosures

None.

## E Capital management

### E.1 Own funds

#### E.1.1 Capital Management Policy

AEL's Capital Management policy, which is approved by the Board of Directors and the Supervisory Board, describes the company's internal capital targets. Besides the aim to always fulfil regulatory capital requirements, the company has also determined internal buffers on top of that regulatory capital.

#### E.1.2 Analysis of Own Funds

The table below provides an overview of movements in and composition of Own funds.

	31/dec/19	Movement in year	Transfers	31/dec/20
€'000				
<b>Tier 1:</b>				
Share capital	45	5.395	0	5.440
Share premium reserve	0	2.200	0	2.200
Total ordinary share capital	45	7.595	0	7.640
Reconciliation reserve before deductions	-215	245	0	30
Foreeable dividends	0	0	0	0
Restrctied own funds (ring fenced funds)	0	0	0	0
Total reconciliation reserve	-215	245	0	30
Deductions for participations in financial institution:	0	0	0	0
<b>Total tier 1 own funds after deductions</b>	<b>-170</b>	<b>7.840</b>	<b>0</b>	<b>7.670</b>
<b>Eligible own funds to cover SCR:</b>				
Tier 1	-170	7.840	0	7.670

#### E.1.3 Differences between equity in the statutory financial statements and excess of assets over liabilities as calculated for solvency purposes

There are no differences between Solvency 2 and the statutory financial statements.

#### E.1.3 Items deducted from Own Funds

No items require deduction of Own funds.

## E.2 Solvency Capital Requirement and Minimum Capital Requirement

The SCR as at 31 December amounts to:

	2020
€'000	
Market Risk	0
Counterparty Default Risk	1.201
Non-Life Underwriting Risk	0
Life Underwriting Risk	448
Health Underwriting Risk	252
Sum of risk modules	1.902
Diversification between risk modules	-424
Basic SCR	1.478
Operational Risk	48
Loss-absorbing capacity of deferred taxes	0
<b>SCR</b>	<b>1.526</b>

No undertaking specific parameters or simplifications are applied. No capital add-ons have been imposed by the DNB.

The MCR has been calculated using the linear calculation as set out in the Solvency 2 Directive.

<b>Overall MCR calculation</b>		C0070
R0300	Linear MCR	169.461
R0310	SCR	1.526.301
R0320	MCR cap	686.835
R0330	MCR floor	381.575
R0340	Combined MCR	381.575
R0350	Absolute floor of the MCR	3.700.000
 		C0070
R0400	<b>Minimum Capital Requirement</b>	3.700.000

Given the above, AEL applies the AMCR of Euro 3.7 million.

Details of the SCR and MCR calculations, including the MCR inputs and floor, are provided in the appended S.25.01 and S.28.01.

## E.3 Use of the duration-based equity risk sub-module in the calculation of the Solvency Capital Requirement

The company does not make use of the duration-based equity risk sub-module in the calculation of the SCR.

## E.4 Differences between the standard formula and any internal models used

The company does not use an internal model.

## **E.5 Non-compliance with the minimum capital requirement and significant non-compliance with the solvency capital requirement**

The Company has met its SCR and MCR at all times during the year.

## **E.6 Any other disclosures**

There is no other information regarding the capital management of the Company that is deemed material to report.
